

# LIGHT TOOLS FOR MECHANICS

## S2

### PEN LIGHT

No mechanic can go through a workday without having to use a portable light tool for inspection of a car. It is essential to have proper lighting in order to be able to spot potential damages or defects. A powerful pen light is the perfect everyday carry light tool for any mechanic as it is easy to carry with its fitted pocket clip. The light beam from a Suprabeam pen light easily illuminates any cavity, gap, compartment with its clear white light.

### HEADLAMP

A good headlamp is an essential light tool for any mechanic. The headlamp illuminates the areas that you look at while keeping your hands free for any task at hand. A headlamp with spot and flood beam is to prefer as you will have the possibility to switch between even illumination of the work area with the flood beam and to light into cavities or just focus on a specific point with the spot beam.
